

# Introduction To Your Audio Program

---

Welcome to your audio learning program to be a freight broker. We are excited that you are interested in learning how to become a successful logistical service provider.

To get started we want you to first take your time. It is very important that you do not rush forward as the knowledge is quite extensive. When you need to go back and re listen then you have that opportunity.

Secondly we want you to make sure you have the manual printed. It is over 317 pages so it's probably best if you have a printing company to do this for you. We do not want you always reading the manual off a computer screen. The best method is to have it printed where it is always readily available for you to underline important facts and be able to go back in the manual and read at your convenience. It is also important that you read each chapter before listening to the chapters teaching program. You will be ready to access the vast amount of information and you will also be more able to understand the teaching by reading the chapter first. So again make sure you read first the chapter and then listen to the teachings.

Next, make sure you add me in your skype. My id is [ofasinfo](#) and you will be able to message me and ask any questions that you need to be answered. I am always looking to work with key people so I hope you are one of those.

There are lots of videos that we have found that will be helpful for you as you go along so again take your time and make sure you watch each of these. The videos along with the teachings will begin to help you build confidence in your new career and give you a better idea of what you need to know to be successful.

The entire time you are working with this audio program, I want you to always familiarize yourself with google maps. This is going to be very important for you to learn how to build traffic lanes. Traffic lanes are the directions your carriers will be delivering freight. In order for you to build a solid lane, you need to be familiar with the US mapping systems. Below is a great video that will help you get started with google maps.

Lastly, make sure you have a Gmail email. This is the standard for email in business and you will want to have an id that is geared towards logistics. An example would be [johnslogistical21@gmail.com](#) . Make sure you customize yours how you would like but making sure it is towards logistics.

Again thanks for trusting us in your learning experience and we look forward to speaking with you in skype.
